# CoRePublisher

COGNOS REPORT PUBLISHER

CoRePublisher is a powerful, yet lightweight, file distribution tool to publish your IBM Cognos BI reports to other CMS systems. It features dynamic and conditional logic to transfer reports to other content management systems. Any report metadata, such as author, prompts and report name can be used to manage the report publication process in a smart and secure way.

USE CASES.

+ Publish to corporate portals
+ Publish to non Cognos stakeholders
+ Enable access for mobile users
+ Archive for legislative compliancy
+ Use data as source on other systems
+ Manage smart file distribution
+ Automate manual processes

CoRePublisher

COGNOS REPORT PUBLISHER

EXTENDED FILE FUNCTIONALITY.

Once published to a target system, the report can be handled as any other file in that system. In SharePoint for example, this can be the use of default and custom metadata columns, lists and views or SharePoint's versioning capabilities.

LIGHTWEIGHT.

The CoRePublisher software has a very small footprint on the IBM Cognos application system. It does not require the Cognos SDK, it doesn't connect to the Content Store and it does neither require configuration changes on the IBM Cognos application tier. Also on the target system there is very little impact. Publishing to MS SharePoint requires no changes to the SharePoint application tier; it simply uses the existing SharePoint Web Service interface as it also does for any other target system.

SMART PUBLICATIONS.

CoRePublisher can use any report metadata to define publication rules and target parameters. You can use the report author, report name, report folder, burstkey and much more to dynamically and conditionally publish to your targets. This makes it easy to work with, yet very powerfull.

ABOUT XPLOREPLUS.

The power of BI is the ability to have the right information available efficiently. xplore+ is a forward thinking software solution company elevating this believe. We develop tools that allow you to get the most out of your BI investment. We focus on standard and custom solutions, leveraging BI and enhancing its possibilities.
